## (54) DOCUMENT RETRIEVAL DEVICE

## (57)Abstract:

PURPOSE: To shorten retrieval processing time by displaying a distribution state which matches or is similar to the retrieval character string within a retrieved document and the matching degree after an equioocation retrieval is performed for all documents and making it possible to easily confirm at which location of each document to be a retrieval object how much extent of identify of the character string with the retrieval character string exists.

CONSTITUTION: A character string is inputted as a retrieval key from a client machine 4 and the matching degree of a display part is set to 70% or more by using a pointing device. The retrieval result performed in the retrieval part of a server is delivered to the client machine 4 and the document title having the matching degree more then a set threshold is displayed on the display together with the number of document titles concerned. Next, when the retrieval character string is a feed forward and a document having the matching degree of 100% is selected, a distribution table 31 is displayed as a popup window 30. The distribution table 31 is expressed by dividing the document into segments 1 to n, shows the matching degree for every segment and displays the contents of the selected segment on a right side (32).

## LEGAL STATUS

[Date of request for examination] 25.03.1999

[Date of sending the examiner's decision of rejection] 22.10.2002

[Kind of final disposal of application other than the  
examiner's decision of rejection or application  
converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of  
rejection][Date of requesting appeal against examiner's decision  
of rejection]

[Date of extinction of right]
